Project Report

Project Name: - Virtual Hospital.

Project Specifications:-

Diseases and Illnesses are with humans from the very beginning. People get sick and need medicine and remedy to cure those diseases. But high medical knowledge and experience of hard long years is required. Common people do not have such high knowledge of medicines and remedies of diseases. Seeing a doctor also cost a lot of time and money to people to see a doctor for normal and common diseases. So this cost of money and expense of time is problem for common people.

This problem is solved by Virtual Hospital, Which prescribe medicine to its patients after analyzing their symptoms according to a huge database of diseases containing collection of symptoms, possible reasons, prescribe able medicine and recommended doctors for further consultation for each specified disease.
